# Contents

|          |   |     |
|----------|---|-----|
| <b>1</b> | <b>Inverse problems and subjective computing</b> . . . . .        | 1   |
| 1.1      | What do we talk about when we talk about random variables?        | 2   |
| 1.2      | Through the formal theory, lightly . . . . .                      | 5   |
| 1.3      | How normal is it to be normal? . . . . .                          | 16  |
| <b>2</b> | <b>Basic problem of statistical inference</b> . . . . .           | 21  |
| 2.1      | On averaging . . . . .  | 22  |
| 2.2      | Maximum Likelihood, as frequentists like it . . . . .             | 31  |
| <b>3</b> | <b>The praise of ignorance: randomness as lack of information</b> | 39  |
| 3.1      | Construction of Likelihood . . . . .                              | 41  |
| 3.2      | Enter, Subject: Construction of Priors . . . . .                  | 48  |
| 3.3      | Posterior Densities as Solutions of Statistical Inverse Problems  | 55  |
| <b>4</b> | <b>Basic problem in numerical linear algebra</b> . . . . .        | 61  |
| 4.1      | What is a solution? . . . . .                                     | 61  |
| 4.2      | Direct linear system solvers . . . . .                            | 63  |
| 4.3      | Iterative linear system solvers . . . . .                         | 67  |
| 4.4      | Ill-conditioning and errors in the data . . . . .                 | 77  |
| <b>5</b> | <b>Sampling: first encounter</b> . . . . .                        | 91  |
| 5.1      | Sampling from Gaussian distributions . . . . .                    | 92  |
| 5.2      | Random draws from non-Gaussian densities . . . . .                | 99  |
| 5.3      | Rejection sampling: prelude to Metropolis-Hastings . . . . .      | 102 |
| <b>6</b> | <b>Statistically inspired preconditioners</b> . . . . .           | 107 |
| 6.1      | Priorconditioners: specially chosen preconditioners . . . . .     | 108 |
| 6.2      | Sample-based preconditioners and PCA model reduction . . . . .    | 118 |

|           |  |     |
|-----------|--|-----|
| <b>7</b>  | <b>Conditional Gaussian densities and predictive envelopes . . .</b>                           | 127 |
| 7.1       | Gaussian conditional densities . . . . .   | 128 |
| 7.2       | Interpolation, splines and conditional densities . . . . .                                     | 134 |
| 7.3       | Envelopes, white swans and dark matter . . . . .   | 144 |
| <b>8</b>  | <b>More applications of the Gaussian conditioning . . . . .</b>                                | 147 |
| 8.1       | Linear inverse problems . . . . .  | 147 |
| 8.2       | Aristotelian boundary conditions . . . . .   | 151 |
| <b>9</b>  | <b>Sampling: the real thing . . . . .</b>  | 161 |
| 9.1       | Metropolis–Hastings algorithm . . . . .  | 168 |
| <b>10</b> | <b>Wrapping up: hypermodels, dynamic priorconditioners<br/>and Bayesian learning . . . . .</b> | 183 |
| 10.1      | MAP estimation or marginalization? . . . . .   | 189 |
| 10.2      | Bayesian hypermodels and priorconditioners . . . . .   | 193 |
|           | <b>References . . . . .</b>  | 197 |
|           | <b>Index . . . . .</b>   | 199 |
